

Coding & Solution

Date	15 March 2026
Team ID	SWTID-2026-9392
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	Python, JavaScript / TypeScript
Framework(s) Used	Streamlit / React, FastAPI / Flask, Google Gemini SDK
Key Features Implemented	• AI Storyboard generation using Gemini Flash/Pro • Visual Panel Layout & Prompt Engineering Engine • Automated Dialogue & Character Consistency tracking • PDF/Image Export capability for generated comics
Pending / Incomplete Features	• Real-time collaborative comic editing • Multi-language automated voiceover integration
Setup / Run Instructions	1. Clone repository 2. Install dependencies: <code>pip install -r requirements.txt</code> 3. Set GEMINI_API_KEY in .env 4. Run application: <code>streamlit run app.py</code>

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project utilizes Google's Gemini models for both natural language processing (story script creation) and visual prompt structure generation. Key emphasis was placed on modular API integrations and clear separation of frontend rendering logic from model invocation services.
